

Edge AI CCTV

Feature overview for store owners and managers

Edge AI CCTV turns your existing security cameras into a smart assistant for your store. A small computer in the store watches the camera feeds, counts and understands shopper movement, and alerts your team to situations worth checking. Everything is viewed in one simple dashboard on a computer or phone.

It works with your current cameras and recorder, runs inside your store, and keeps only what is needed as evidence.

Live cameras

Feature	What it does for you
Live camera view	See your cameras live from any authorised computer or phone.
Rotating camera wall	Shows four cameras at a time and cycles through the rest, so every area gets seen.
Pin a camera	Keep an important camera on screen while the others rotate.
Turn cameras on or off	Switch off cameras you don't need right now; they then use no processing power.
Camera health	Shows at a glance which cameras are working, which are offline, and why.
Night-vision awareness	Knows when a camera is in daylight, low light or infrared night mode.

Understanding your store

Feature	What it does for you
Visitor counting	Counts people entering and leaving through your doors, hour by hour.
People in store now	Shows roughly how many shoppers are inside at this moment.
Busiest hours	Compares today with yesterday and the same day last week.
Store map	A floor plan of your store showing where people are and where cameras point.
Heatmaps	Shows where shoppers walk, where they stop, and which shelves they touch.
Visit time	Measures how long shoppers stay in the store and in each area.
Checkout and queue times	Measures how long customers wait and how long service takes at the tills.

Shelves and products

Feature	What it does for you
Shelf interest	Counts how often shoppers reach into each shelf and product area.
Areas shoppers skip	Highlights areas people walk past without engaging.
Sales link (optional)	Connects with your till data to compare shelf interest with actual sales.
Recommendations	Suggests practical changes, such as layout or staffing, based on what was measured.
Daily report	A printable one-page summary of the store's day.

Loss prevention

Feature	What it does for you
Suspicious behaviour alerts	Flags possible concealment, shelf sweeping, loitering at high-value items and leaving without passing checkout.
Review queue	Every flag comes with a picture for staff to check. A flag is a prompt to look, not proof of theft.
Outcome tracking	Staff record what really happened, so the system shows which alerts are useful.
Restricted areas	Alerts when someone is in an area they shouldn't be, at the times you choose.
Line crossing	Alerts or counts when people cross a line you draw, such as a back door.

After-hours security

Feature	What it does for you
Night watch	Watches selected cameras during your closed hours and alerts you if a person appears.
Smart motion check	Ignores headlights, shadows and night-vision switching, so you are not woken by false alarms.
Your time zone	Alerts show the store's local time, and your own time if you are away.

Alerts and access

Feature	What it does for you
Phone alerts	Sends alerts to paired phones, filtered by type, camera and quiet hours.
Secure online access	Open the dashboard securely from outside the store with your own web address.
Protected sign-in	Every screen requires a signed-in user; repeated wrong passwords are blocked.

Privacy and data

Feature	What it does for you
Privacy masks	Blur or hide areas such as the street, neighbours or staff rooms in every picture.
Evidence only	Keeps only pictures (and optional short clips) of alerts, never continuous recording.
Automatic clean-up	Old evidence is deleted automatically when it reaches the age or size limit you set.
Your recorder is untouched	Your existing video recorder keeps doing its job; the system never writes to it.
No face recognition	People are counted and followed anonymously; no faces or identities are stored.
Honest figures	When something can't be measured, the dashboard says so instead of guessing.

Coming soon

Feature	What it does for you
Sharper person detection	A new detection model that finds people further away and in darker areas.
Staff areas	Mark staff-only areas and teach the system your uniforms, so it can alert when a non-staff person enters.
Outside cameras	Front street, loading dock and car park settings: perimeter alerts, loitering, delivery log and tamper alerts.
Shopper attention	Shows which shelf areas shoppers look at, and how often looking turns into picking up.
Distant-area focus	Extra detail for far ends of aisles on high-resolution cameras.

Features listed as coming soon are in development or testing and may change before release.
